Disconnect the scan tool cable from the diagnostic connector. Note: You may 4: need to update the sdb.ini file. 5: While updating the sdb.ini file, it is recommended that 6: you copy the sdb.ini file to another location, such as 7: the folder where AutoMate is installed. 8: Double click the sdb.ini file to open it in a text 9: editor. Note: Do not change the value of the 10: 0 in the "Additional Parameters" 11: list. Write the changes to the sdb.ini 12: file. 13: To close the editor: Right click on the sdb.ini 13: file and select Open (default). 14: 15 Open the AutoMate 1 interface, press the 4-2-1 14: key and select the Diagnostic Connector. Note: 1: Press the 5-2-1 key to open the Diagnostic Connector You have probably heard of the different types of ignition keys. But did you ever really think of what they do and why they are there? What is an ignition key for and how does it work? There are ignition keys for different makes and models of cars and truck engines. There is a key for every vehicle. You can use this key on your car, van, truck or any other vehicle. There are two types of keys. The first type is called the universal ignition key and is designed for use with all cars and trucks. It may have two or three holes that can be used for different versions of vehicles. The second type is called a brand specific ignition key and is designed for use with a specific make and model of vehicle. It is designed with a number of holes to make it easy for the mechanic to find the right key to install on the correct car. What are the differences between the two types of keys? The universal ignition key is used for most vehicles in the world. This key is very common and has two holes to use it on two different vehicles. This key is also known as the Chrysler, GM, Ford, etc. type of key. This key is different from the brand specific key that has several holes. The brand specific key may be used for only one vehicle and has holes that identify the key so that the mechanic can determine which ignition is correct for the car. What is the difference between a locking ignition key and an unlock ignition key? 82157476af
